

EPOXY ANCHOR BOLT KIT SKU 5215912

These adhesive insert anchors are the ultimate problem solver.

These high-performance adhesive insert anchors are the perfect floor-anchoring alternative for your MaxJax portable car lift. The special proprietary anchors are internally threaded and specifically designed for use with structural adhesive. Because the structural adhesive adheres to the entire length of the anchor body, it produces excellent strength and long-term holding values.

For installations where there may be a concern over the condition of the concrete, these special epoxy anchors were designed and tested to offer increased reliability. The two-component epoxy formula is resistance to vibration and provides long-term durability.
