- Added 5.5" Rise / Tall Adapters / Set of 4 / SKU 5215752

**SOLD IN SETS  
OF FOUR**

### Configure variable lifting heights with these stackable adapters.

When using the MaxJax on a variety of different vehicles, you may find that a little extra height is needed to reach certain vehicle lift points. Perhaps the standard medium stackable adapters that come with every MaxJax are a little too high. That's where these stackable adapters come in handy. They're designed to work with the standard MaxJax lift pads, and the optional frame cradle pads. Use them to configure variable pad height settings on vehicles with high and low jack points, or stack them high when servicing raised trucks.

If you've got the garage ceiling that will allow, use the added-rise stacking adapters to increase the lifting height of your MaxJax and give yourself a little more headroom while working underneath.
