

ANCHOR BOLT KIT
SKU 5215911

Use the MaxJax in Multiple Locations

The standard MaxJax anchor bolt kit includes; 10 recessed anchors, 10 anchor bolts, and 10 flat washers. Everything you need to anchor your MaxJax two-post portable car lift safely and securely. Purchasing additional sets allows you to setup your MaxJax in multiple locations throughout your automotive shop or home garage. You may want the MaxJax set up in both narrow and wide configurations for servicing narrow body vintage classics, or wide-body trucks and sports cars.

MaxJax anchor bolts are constructed out of a zinc-plated carbon steel body and wedge clip, which will expand to securely anchor your MaxJax posts in place. These drop-in anchors include a wedge-type mechanism that creates a secure hold generating an ultimate tensile strength of up to 16,500-lbs each when installed in 4,000-psi solid masonry and/or untracked concrete. When combined, that's almost 12 times the maximum capacity of the MaxJax car lift system at 7,000-lbs. in a single post!

Features/Specs

- Kit includes: 10 internally threaded drop-in anchors, 10 anchor bolt, and 10 flat washers
- Wedge anchor performance with the convenience of a drop-in
- Wedge clip expands to secure the anchor in place
- Ultimate tensile strength is up to 16,500-lbs each
